

Introduction to minion.

\$MINION (MINION-000) is a token on the VITE network, it is minted for the utility of using the minion swap.

There are a few utility's for holding \$MINION.

Holders that stake \$MINION will be able to use the minion swap (bot) without fees, they will also be rewarded for the staking with a percentage of the fees from the swap.

Once there is enough \$MINION sold, an SBP will be made and a percentage of the rewards will be distributed amongst holders (by ratio of their holdings)

\$MINION is created by vitaminion as a utility token for swapping and for rewarding its holders.

Utility.

\$MINION swap is build with the little amounts in mind. The little amounts all of us get from rewards (eDAO as example).

As it takes a long time to accumulate enough to be able to sell it for VITE, we came up with the idea of a swap.

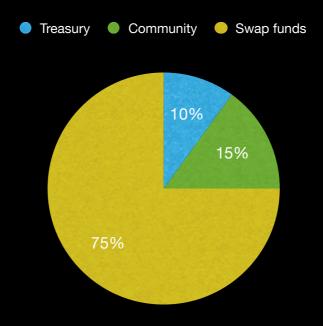

This swap can be used to swap your rewards to VITE or VITC. The swap will have a 5% fee for use. Members who buy \$MINION and stake the amount required (\$10) with the bot will be able to use the swap without fees.

Tokenomics

The total supply of \$MINION is 10 billion (10,000,000,000), \$MINION is not re-issuable so there is no inflation.

The distribution of \$MINION will be like this:

- 10% will be used for the treasury
- 15% will be used for community projects and distributions of rewards.
- 75% will be available for sale at \$MINION swap.

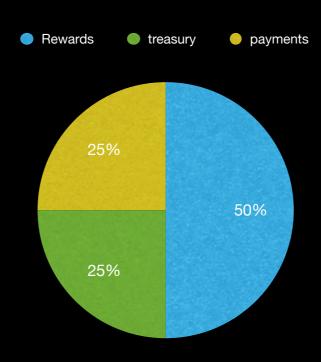

All the funds that are collected by selling \$MINION will be used for a future SBP and for buying more tokens. For every 10k VITE there will be a full node setup and 50% of those rewards will be used to reward the stakers of \$MINION token.

Reward distribution:

Rewards distribution will be done as like this:

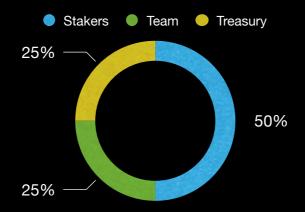

As long as there is not a SBP, 50% of the fees and rewards collected will be distributed amongst the stakers of \$MINION token, the other 50% will be split as followed. 25% will go to treasury and 25% will be used for team payments.

As soon as there is an SBP the rewards will change to the following:

Fees:

50% will be distributed amongst the stakers of \$MINION token. 25% will be used for team payments. 25% will be used for treasury.

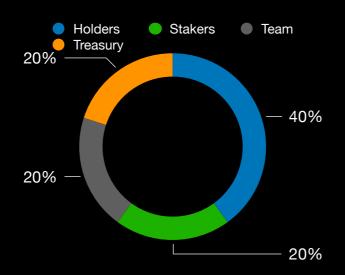

SBP Rewards:

40% will be distributed amongst the holders of \$MINION token.

20% will be distributed amongst the stakers of \$MINION token.

20% will be used for team payments.

20% will be used for treasury.

Example distribution without SBP:

There is \$5 collected in fees from the swap, \$2,5 is divided amongst all stakers.

\$1,25 is deposited in the treasury.

\$1,25 is used for team payments.

Example distribution with SBP

There is a \$5 collected in fees from the swap, \$2,5 is divided amongst all holders.

\$1,25 is used for treasury.

\$1,25 is used for team payments.

Rewards from the SBP are distributed as followed:

40% will be distributed amongst the holders of \$MINION token relative to their holdings.

20% will be distributed evenly amongst the stakers of \$MINION token.

20% will be used for team payments.

20% will be used for treasury.

All fees will be send as soon as it reaches \$5. As fees are taken in the token they are swapped to, the fees will be send as that token as well.

All rewards from SBP will be send daily.

Roadmap:

End of Q2 - beginning of Q3: Swap finished and website online.

End of Q3:

Tradingbot and Whale watcher finished.

No timeline:

SBP will be made as soon as there are enough funds to do so.

Full nodes will be made once a week as soon as there are enough funds to do so.
